

# Cree® CLN6A-WKW/MKW Data Sheet

The CLN6A LED delivers superior value with common voltage, current, size and optical properties. The Cree CLN6A is available in both cool and warm white to address a variety of lighting applications, including linear, portable, landscape and entertainment.

#### FEATURES

- Size (mm): 5.0 x 5.0 x 1.3
- Cool White (CLN6A-WKW):
  - » CCT: 4600 K 15000 K, typical 5500 K
  - » CRI: 72
  - » Luminous Flux: 60.5 101.8
- Warm White (CLN6A-MKW)
  - » CCT: 2500 K 4600 K, typical 3200 K
  - » CRI: 80
  - » Luminous Flux: 51.0 101.8
- Max. Current: 350 mA
- Viewing Angle: 115°
- RoHS-Compliant

#### APPLICATIONS

- Linear Lighting
- Channel Letter
- Portable Lighting
- Architectural & Landscaping Lighting
- Entertainment Lighting

#### Notes

#### **RoHS** Compliance

The levels of environmentally sensitive, persistent biologically toxic (PBT), persistent organic pollutants (POP), or otherwise restricted materials in this product are below the maximum concentration values (also referred to as the threshold limits) permitted for such substances, or are used in an exempted application, in accordance with EU Directive 2002/95/EC on the restriction of the use of certain hazardous substances in electrical and electronic equipment (RoHS), as amended through April 21, 2006.

#### Vision Advisory Claim

Users should be cautioned not to stare at the light of this LED product. The bright light can damage the eye.

### Kit Number System

Cree LED lamps are tested and sorted into performance bins. A bin is specified by ranges of color, forward voltage, and brightness. Sorted LEDs are packaged for shipping in various convenient options. Please refer to the "Cree LED Lamp Packaging Standard" document for more information about shipping and packaging options.

Cree LEDs are sold by order codes in combinations of bins called kits. Order codes are configured in the following manner:

### Soldering & Handling

- 1. Cleaning
  - Don't use unspecified chemical liquids to clean the SMD LED; the chemical could harm the SMD LED. When washing is necessary, please immerse the SMD LED in alcohol at normal room temperature for less than 1 minute and dry at normal room temperature for 15 minutes before use.
  - The influence of ultrasonic cleaning on the SMD LED depending on factors such as ultrasonic power and the way SMD LED are mounted. Ultrasonic cleaning shall be pre-qualified to ensure this will not cause damage to the SMD LED.
- 2. Moisture-Proof Packing
  - In order to prevent moisture absorption into SMD LED during the transportation and storage, SMD LED is
    packed in a moisture barrier bag. Desiccants and a humidity indicator are packed together with SMD LED as the
    secondary protection. The indication of humidity indicator card provides the information of humidity within SMD
    packing.
- 3. Storage
  - Shelf life in original sealed bag at storage condition of <40°C and <90%RH is 12 months. Baking is required whenever shelf life is expired.
  - Before openning the packaging , Please check whether bag leak air or not.
  - After bag opening, the SMD LED must be stored under the condition < 30°C and < 60%RH. Under this condition, SMD LED must be used (subject to reflow) within 168 hours after bag opening, and re-baking is required when exceeding 168 hours.
  - For baking, place SMD LED in oven at temperature 80°C±5°C and relative humidity <=10%RH, for 24 hours.
  - Take out the material from packaging bag for re-bake. Do not open the door of oven frequently during the baking
    process.
- 4. Soldering
  - Manual soldering by soldering iron
  - The use of a soldering iron of less than 25W is recommended and the temperature of the iron must be kept at below 315°C, with soldering time within 2 seconds.
  - The epoxy resin of SMD LED should not be in contact with tip of soldering iron.
  - No mechanical stress should be exerted on the resin portion of SMD LED during soldering.
  - Handling of SMD LED should be done when the package has been cooled down to below 40°C or less. This is to
    prevent the SMD LED failures due to thermal-mechanical stress during handling.
  - Reflow Soldering: The temperature (top surface of SMD LED) profile is as below:

Solder = Lead-free				
Average ramp-up rate = $4^{\circ}$ C/s max	Peak temperature = 250°C max.			
Preheat temperature = $150^{\circ}C \sim 200^{\circ}C$	Time within 5°C of actual Peak Temperature = 10s max.			
Preheat time = 100s max.	Duration above 217°C is 80s max.			
Ramp-down rate = $6^{\circ}C/s$ max.

### Packaging

- The boxes are not water-resistant, and they must be kept away from water and moisture.
- The LEDs are packed in cardboard boxes after packaging in normal or anti-electrostatic bags.
- Cardboard boxes will be used to protect the LEDs from mechanical shocks during transportation.
- The reel pack is applied in SMD LED.
- Max 1100 pcs per reel.
